

OpenSystem 105

As a manufacturer Laserdenta develop and produce all the components for the open CAD/CAM system "OpenSystem 105" themselves. By doing so Laserdenta offer the "system security" of a manufacturer together with the option of combining and extending all the components to other open systems too.

In addition, the openness of the system means that different materials from different manufacturers can be used. There are no manufacturer commitments as there would be with a closed system. The gross margin per job can be increased considerably just through purchasing materials at market prices alone.

OpenSystem 105

OpenSystem 104

Like our "OpenSystem 105" the "OpenSystem 104" is also a "Made in Germany" production.

Developed for entry into the digital world of the computer-assisted manufacture of dental prosthetics, this system offers all you need for your laboratory requirements. An unrivalled price/performance ratio, combined with the advantage of an open system, means that your investment is secure.
